

FIESTA LAWN WEED KILLER

Frequently Asked Questions

Q: Since FIESTA is iron based will it turn the turf dark green?

A: Greening is not expected on a well fertilized lawn, however where no nutrient program exists a greening effect may occur.

Q: Will FIESTA leave a stain on walks if over sprayed?

A: Over sprayed areas should be rinsed to avoid staining.

Q: Can FIESTA cause turf damage?

A: At high temperatures (>85F) on stressed lawns temporary grass tip burn has been observed. This can be removed with mowing.

Q: Is FIESTA compatible with most spray equipment?

A: Yes. Corrosion studies on brass and stainless steel have been completed. Rinse spray equipment at the end of each day to avoid wear on metal parts.

Q: Can FIESTA be tank mixed with other products?

A: Work in this area needs to be done, however FIESTA is very stable and expected to mix well with other products.

Q: What is the shelf life of FIESTA?

A: Over 2 years and counting.

Q: How long after using FIESTA can I seed grass?

A: Research has shown that turf can be seeded one day after FIESTA has been applied.

Q: Can FIESTA be used on new turf?

A: Initial data submitted did not specify age of turf in the trials. Further trial work is planned for Spring 2010. Much of the trial work done with FIESTA was performed on turf that was 30-45 days old.
